

IRIS[®]

BY KOBETRON

NEW TIME-SAVING FEATURES!

IRIS: An Integrated Regulatory Inventory System that gives you total casino floor management.

All over the world, regulators just like you save time and money every day with IRIS by Kobetron®. It is the field-proven, essential tool for regulators from jurisdictions of all sizes. Now, IRIS is better than ever, thanks to six new incredible features developed based on direct feedback from IRIS users. These new features make IRIS even more responsive and more complete than ever. That means there has never been a better time to bring IRIS by Kobetron to your jurisdiction.

NEW FEATURES!

Change Requests and Projects

Quickly and easily schedule a wide range of changes to EGMs, whether the change is for a single game or an entire bank. Configurations, removals, moves, payable editing, denoms, and more – do it all with this user-friendly feature. Easily manage settings to grant tool usage permissions and other settings.

Checklists

Convert paper into electronic Checklists, then use Checklist forms to ensure every step is followed and errors are eliminated. Store Checklists for future use, and create and store an unlimited number of Checklists.

Component Bundles

Easily create groups of components to be installed on current and future EGMs. Install an entire group of components into an EGM by selecting the single component bundle, saving time and money by streamlining future installs. Create and save an unlimited number of Component Bundles for future use.

Progressives

Add, remove, and transfer progressives between EGMs fast with the Progressives tool. Set multiple Progressive Tiers, Reset Values, and Incrementation Rates, right from the IRIS tool. Progressives also allow user to set up their own type of progressives like WAPs, SAPs, or Locally Linked.

Shipping

Finally, shipping processes and procedures are standardized across OEMs and jurisdictions. The Shipping feature even lets you track shipping from all carriers in one convenient place. Request EGM and individual software components from manufacturers to be shipped to your location. Simply choose the ITL from the database and click to submit for approval. Once approved, the request is automatically sent to the manufacturer for fulfillment. The manufacturer then will review the request and fulfill the order with all the appropriate tracking information, including where the shipment is being sent from and with what mail carrier.

Vault

Automatically maintain an inventory of all components, both installed and removed. Once a component is installed on an EGM, it will be marked as installed, so you can easily decipher how many components you have. From software components installed on new EGMs, to components removed and placed back into inventory, Vault automatically tracks it all. Vault also updates based on any new shipments that have been processed from the manufacturer, helping you to maintain an accurate and up-to-date inventory for your casino.

Bring IRIS to your jurisdiction today and start saving time and money.
