

KOBETRON LINK

INTRODUCING

The *all-new* Kobetron Link

Kobetron.com

Kobetron technology from GLI has been increasing accuracy, accountability, and efficiencies for years. **Kobetron Link dramatically increases efficiency and eliminates human error.** The result is a full and instant accounting of every piece of software in every EGM.

With Kobetron Link, you can signature software with Verify+ and the GI-4000 Pro.

You choose what to do next: Create a new record, compare signatures, even add components to the Vault. The power is in your hands.

Here's what's new:

1. More accurate slot file management.

Kobetron Link uses each piece of software's unique signature to maintain installed software on all EGMs across the entire slot floor. It also uses those unique signatures to maintain the software inventory inside of the IRIS Vault feature, eliminating human error in your IRIS database.

2. Faster slot file management. With one quick step, Kobetron Link allows Verify+ and GI-4000 Pro users to update their EGM records and their Vault inventory inside of IRIS.

3. Compatible with GAT. Using GAT, Kobetron Link allows users to signature all the software in an EGM all at the same time.
